

1

WHAT IS CLAIMED IS:

1. A piping clamp for a concrete form, comprising:
 - 5 a base attachable to an upper surface of the concrete form, the base comprising:
 - an upper portion; and
 - a standoff portion extending along a first axis;
 - 10 and
 - a spring clamp for engagement with a pipe in a clamping relationship, the spring clamp extending from the upper portion of the base along a second axis.
2. The piping clamp of claim 1, wherein:
 - 15 the base further comprises:
 - a top surface; and
 - a bottom surface; and
 - a plurality of fastener openings extending through the base from the top surface to the bottom surface.
 - 20
3. The piping clamp of claim 2, the base further comprising a front surface and a back surface, wherein the plurality of fastener openings are staggered in a spaced apart relationship with respect to the front surface and the back surface of the
25 base.
4. The piping clamp of claim 1, the spring clamp further comprising:
 - 30 a web portion adjacent the upper portion of the base and having an inner surface;
 - a first curved finger extending from the web portion and having an inner surface;
 - a second curved finger extending from the web portion and having an inner surface;
 - 35

1

wherein the web portion's inner surface, the first
finger's inner surface, and the second finger's inner
surface together define a substantially circular clamping
5 area.

5. The piping clamp of claim 4, the first curved finger and the
second curved finger further comprising a first entry portion
having an inner surface and a second entry portion having an
10 inner surface, respectively, the inner surface of the first entry
portion and the inner surface of the second entry portion
together defining a throated entry for the clamping area.
